408-384-6202 San Luis Obispo, CA

Aspiring software engineer with strong foundations in Python, Java, and full-stack development.
Passionate about building scalable systems and AI-driven solutions.

EDUCATION:

California Polytechnic State University, San Luis Obispo (Cal Poly)

Bachelor of Science, **Computer Science**

Expected: June 2028

GPA: 3.85

Coursework:

CS50's Introduction to Programming with Python

Data Structure

Objective-Oriented Programming and Design

Intro to Computer Organization

SKILLS:

Programming Languages: Python, Java, HTML 5, JavaScript

Web & Cloud: React.js, AWS (Lambda, DynamoDB, API Gateway, S3), RESTful APIs

Tools/Skills: Database design & management, GitHub Version Control, SSH

LEADERSHIP EXPERIENCE:

Club President, Monte Vista Christian High School Chess Club.

Led the club in organizing weekly meetings and regional chess tournaments

PROJECTS:

Course Tracker | Full-Stack Web Application

Summer 2025 - Now

- Engineered a React.js frontend and AWS Lambda + DynamoDB backend, enabling students to track textbook prices across their courses.
- Designed and optimized NoSQL schema with composite keys and entity discrimination to support CRUD, bulk imports, and scalable search with pagination.
- Implemented authentication, CORS, and responsive UI for efficient course-item management and streamlined data retrieval.

DeepSeek-R1 LoRA Fine-Tuning | Python · PyTorch

Summer 2025

- Deployed the DeepSeek-R1-Distill-Qwen-14B model locally with 4-bit quantization for efficient GPU inference on an RTX 4070.
- Implemented LoRA fine-tuning using custom CSC 202 course documents, enabling domain-specific question-answering for data-structure topics.

IB Extended Essay | Zero-Sum Game Algorithm

Winter 2023

- Conducted independent research on algorithmic time complexity in two-player zero-sum games
- Explored and compared the efficiency of alpha-beta pruning and minimax algorithms, demonstrating a 90% efficiency gain in decision computation
